AI-assisted understanding for mainframes and monoliths

Trapped SME knowledge → Shared model → Safer modernization

Traceable

Client-Controlled

Org Wide Model

The Business Problem

ascendion.com

ASCENDION

SME Bottleneck

Critical COBOL / FORTRAN / PL/SQL / Java monoliths run core business, but knowledge is trapped in a handful of SMEs

Slow Onboarding

Onboarding new engineers and doing impact analysis takes weeks, slowing releases and increasing risk

Individual Tools, Not Org Understanding

"Just give 5 devs a copilot" helps individuals, but does not create org-wide understanding of the estate

Understanding is the constraint.

Why "Just Give the Team Copilot" Fails

VS

Our 3-Tier Offering

ascendion.com

ASCENDION

1

Legacy System X-Ray

Assessment • 2–4 weeks

Rapid assessment + system map + traceable Q&A center

2

Legacy Code Navigator

Team Copilot

Production-grade knowledge layer for daily engineering work

3

Modernization Accelerator

De-risk Modernization

Use the knowledge layer to prioritize and de-risk modernization

Understanding

Daily Use

Modernize

Tier 1 Legacy System X-Ray

ascendion.com
Assessment • 2–4 weeks

ASCENDION

Ask Your Legacy System

Evaluation only.

Tier 2 Legacy Code Navigator

ascendion.com Team Copilot • Production-grade knowledge layer

ASCENDION

Code / Jobs /
Schemas

Ingestion
Pipeline

Knowledge
Layer

IDE / Web /
API

Impact Analysis

Which modules are affected by a schema change?

Business Flow Tracing

Trace end-to-end flows across COBOL programs

Explain This Program

Plain-language summary of any module's purpose

Data Lineage

Track data from input through processing to output

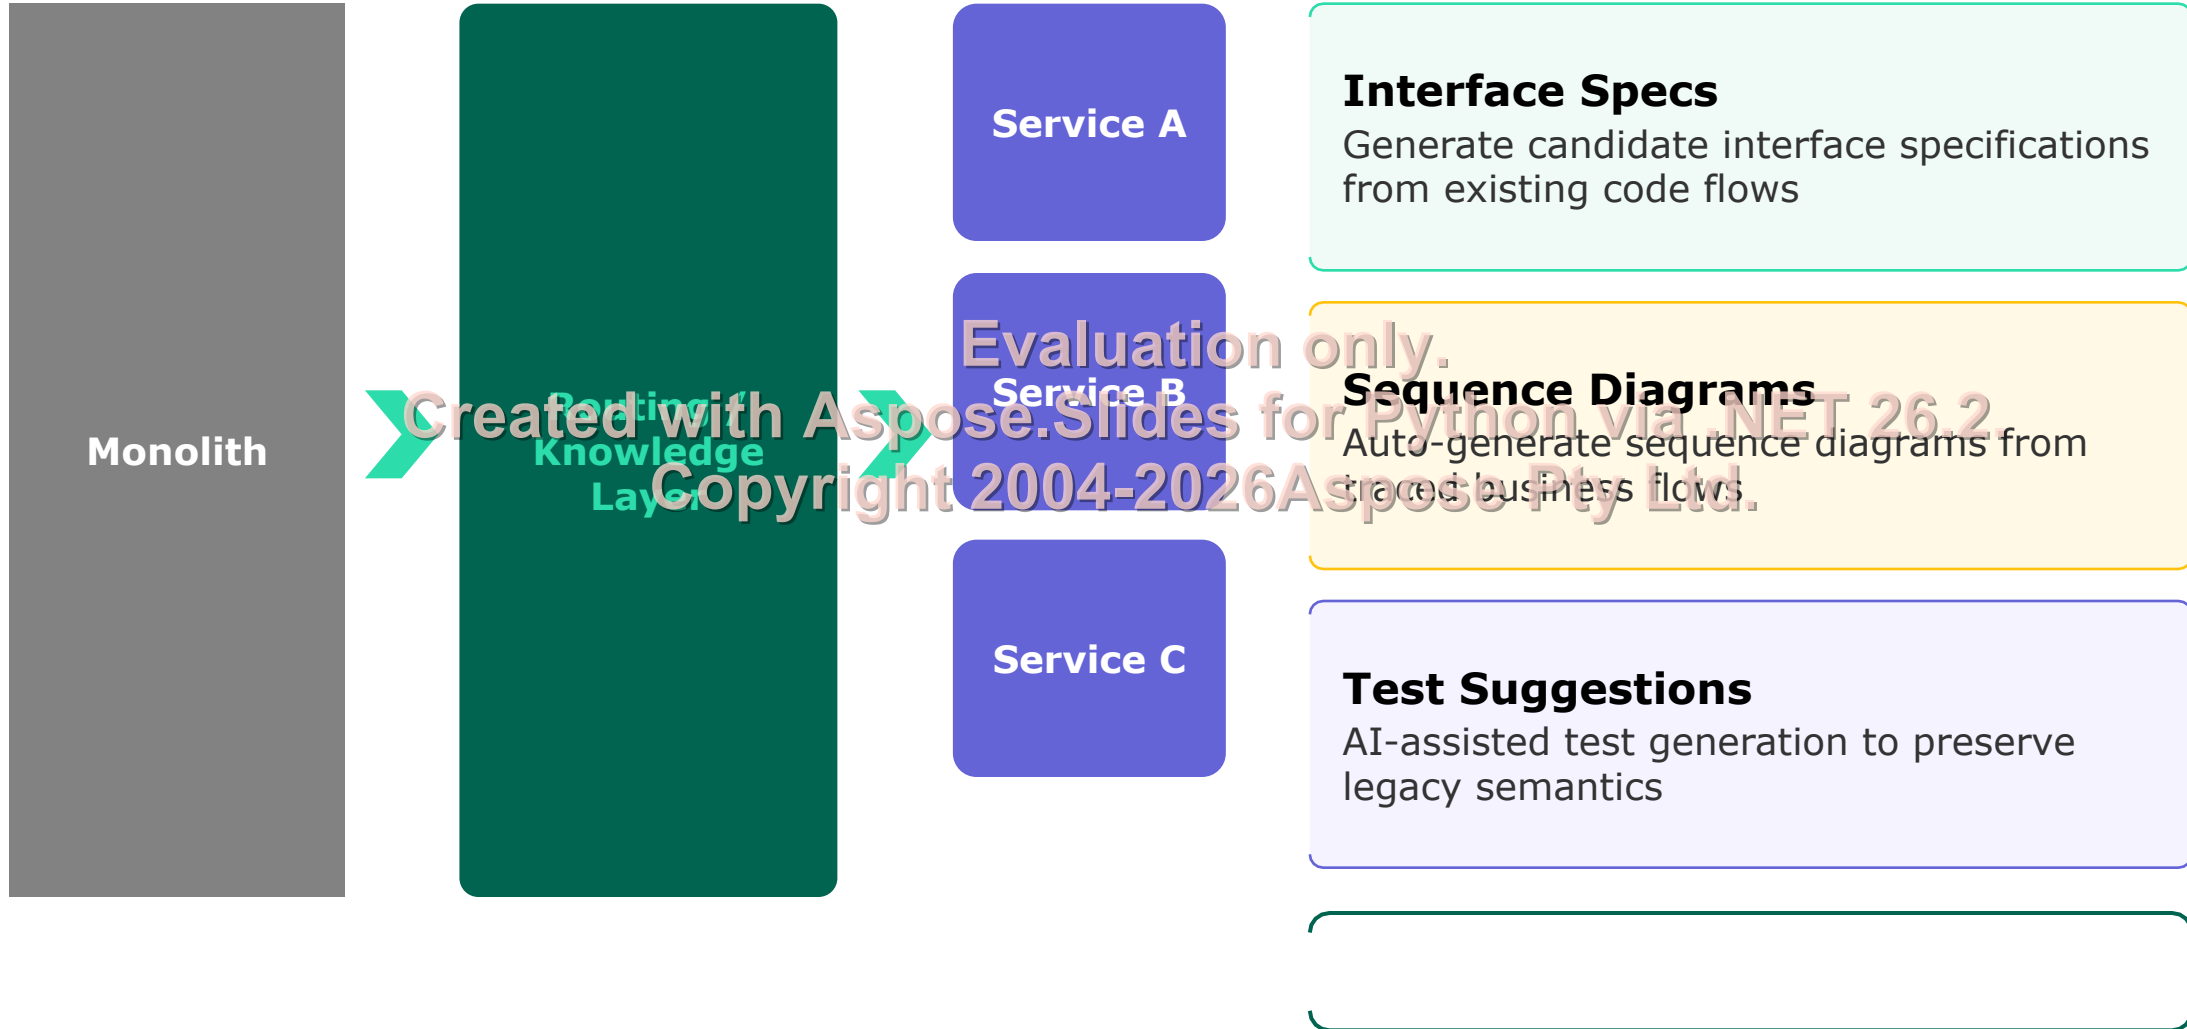

Guided Onboarding Walkthroughs

- Optional IDE / Web integration
- Deployed in client VPC

Tier 3 Modernization Accelerator

ascendion.com
De-risk modernization using the knowledge layer

ASCENDION

How This Differs from "Just Buy Cursor / Claude Code Licenses"

ascendion.com

ASCENDION

Knowledge Model

Ad-hoc file summaries in chat history

Persistent system model: call graphs, data flows, entity maps

Governance

Individual, signed context per developer

Shared across teams: onboarding tours, impact reports, dashboards

Environment

Cloud-hosted, data leaves your perimeter

Client-controlled (on-prem / VPC) with audit trail

Non-negotiables: Traceable • Auditable • VPC / On-Prem

Business Outcomes

Flywheel: Learn → Document → Query → Improve → Modernize

Engagement Approach (Typical)

Week 0

1

Scope & Setup

Scope, access, success criteria, guardrails (security, audit, residency)

Weeks 1–2

2

Ingestion & Mapping

Ingestion + initial system map + first impact maps

Weeks 3–4

3

Demo & Readout

Traceable Q&A demo + findings readout + tiered roadmap

Deliverables Starter Kit

System Atlas • Impact Maps • Query Recipes • Deployment Plan
